

Integrated Production Optimization Services (IPOS)

Integrated Production Optimization Services or IPOS is a division within Haimo set up as a result of client feedback into how we can assist in improving their decision making process. In the past, lack of data points was a major issue in field optimization but due our competitive metering range this is largely becoming a thing of the past and the question is now - what can we do with all this data to improve production efficiency and reduce costs?

With our extensive experience in 5 continents over 20 years of working with customers to improve their metering and monitoring capabilities Haimo IPOS are well placed to answer this question. As an operator of non-conventional assets in the USA, we are aware of how to make best use of multiphase flow software and data interpretation to offer services which provide cost-effective optimization solutions.

Haimo IPOS offers a full platform offering effective solutions for Data Collection through to Solution Definition. Please find out more about each package by clicking the links below:

Our Offerings				
Data Collection	Data Validation & Cleansing	Surveillance	Production Analysis	Solution Definition

Multiphase Flow Meters	Well Test Optimizer	Smart Alarm System	Well Performance Evaluation	Field Development Planning
Wet Gas Meters	Well Test Verification Tool	Real Time Well Monitoring	Reservoir Modelling	Production Enhancement Contracts
Low Production Tester	Intelligent Allocation System		Integrated Asset Modelling	
High Performance Tester				
Water Cut Meter
